9. Note the attached Information Disclosure Statement(s)( PTO-1449) Paper No(s). \_\_\_\_\_.

Art Unit: 1733

## **Advisory Action Attachment**

The new issues and issues of new matter are (1) changing "a high pressure air source that supplies air pressure to said contact pins" (claim 1) to --an air source that supplies air pressure to extend said contact pins-- and (2) changing "supplying high pressure air to said contact pins" (claim 14) to --supplying air to extend said contact pins--.

## Remarks

Applicant argues that the 35 USC 112 first paragraph has been overcome in that the claims comply with the written description requirement. The 35 USC 112 first paragraph rejection stands because the original disclosure fails to reasonably convey supplying high pressure air to the pins <u>instead of</u> cylinder 40. The original disclosure describes sending the air to the air cylinder 40. No other location such as an inflatable contact pin is described.

The 35 USC 112 second paragraph rejection stands for the reasons given in the last office action. It remains unclear if claims 1 and 14 require direct contact of air and pins or something else (e.g. an air cylinder) and, as such, the location to which the high pressure air is supplied remains unclear.

Applicant argues that there is no motivation to modify Europe '178 to have jigs 6, 8 and shafts 18, 20 of Japan '234 and that the glass plate 11 of Europe '178 might be damaged or destroyed due to pressure applied by the upper jig. These arguments are irrelevant since claims 1 and 14 fail to require jigs.

Applicant argues that there is a lack of motivation to modify the combination of references in the manner set forth in the office action. The examiner disagrees since (1) Japan '234 motivates one of ordinary skill in the art to use a centerer having **radially movable pins** in Europe '178's process of making a laminated optical disc to <u>so that the substrates of the laminated optical disc are aligned with high accuracy</u> and (2) Japan '137 suggests <u>moving</u> **radially movable pins** of a centerer <u>using an air cylinder</u>.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven D. Maki whose telephone number is (571) 272-1221. The examiner can normally be reached on Mon. - Fri. 7:30 AM - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on (571) 272-1226. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
